

John Andersen, Ph.D.  
Chief  
National Institute on Drug Abuse

Dr. Anderson received his doctorate in molecular and cellular biology from the University of Arizona in 2000. He specializes in System Configuration Management and Automation, Linux, Perl, Bioinformatics analysis and coding. Before joining NIDA, he worked as technical lead on a project with the U.S. Census Bureau to develop the Centurion system, a web-based data collection application for accurate and effective collection of all Census Bureau economic and other data for a wide variety of survey customers and respondents. Prior to that, Dr. Anderson worked with the National Center for Biotechnology Information as a Senior Linux Systems Administrator, where he grew Linux deployment from less than 20 servers to over 700 over a five year period, involving conversion of all public-facing services from Solaris/Sparc systems to Linux/Intel.
